

Product Funnel Analysis Dashboard (Microsoft Excel)

Problem Statement

Analyse user behaviour across a signup and purchase funnel to determine the number of unique users at each stage, calculate conversion rates, identify the largest drop-off, and provide actionable business insights through an interactive Excel dashboard.

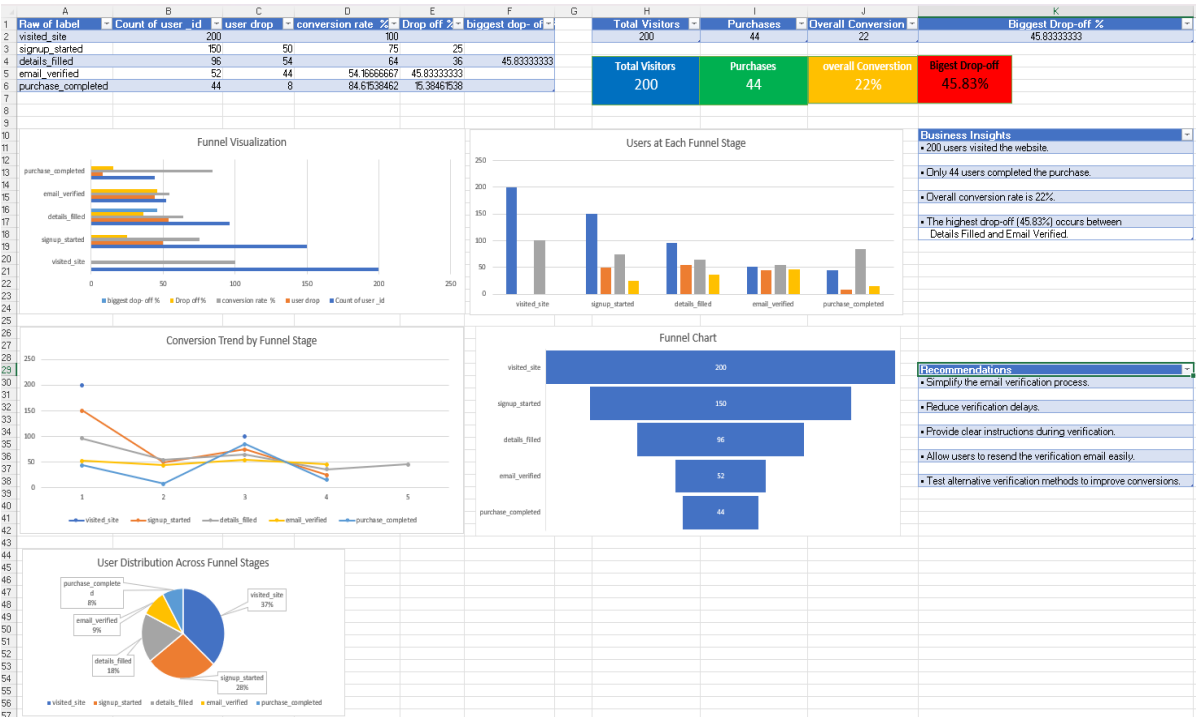

Tools Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- KPI Cards
- Conditional Formatting

Approach Summary

Imported the funnel event dataset into Excel and used Pivot Tables to calculate unique users at each funnel stage. Computed conversion rates, drop-off percentages, and identified the largest drop-off between Details Filled and Email Verified (45.83%). Built an interactive dashboard with KPI cards, charts, business insights, and recommendations.

Dashboard

Business Insights

- 200 users visited the website.
- Only 44 users completed the purchase.
- Overall conversion rate is 22%.
- The largest drop-off (45.83%) occurs between Details Filled and Email Verified.

Recommendations

- Simplify the email verification process.
- Reduce verification delays.
- Improve email delivery reliability.
- Provide clearer verification instructions.
- Test alternative verification methods.

Product Funnel Analysis Dashboard (Python)

Problem Statement

Analyse product funnel events using Python to measure conversion performance, drop-off rates, and user behaviour across each funnel stage.

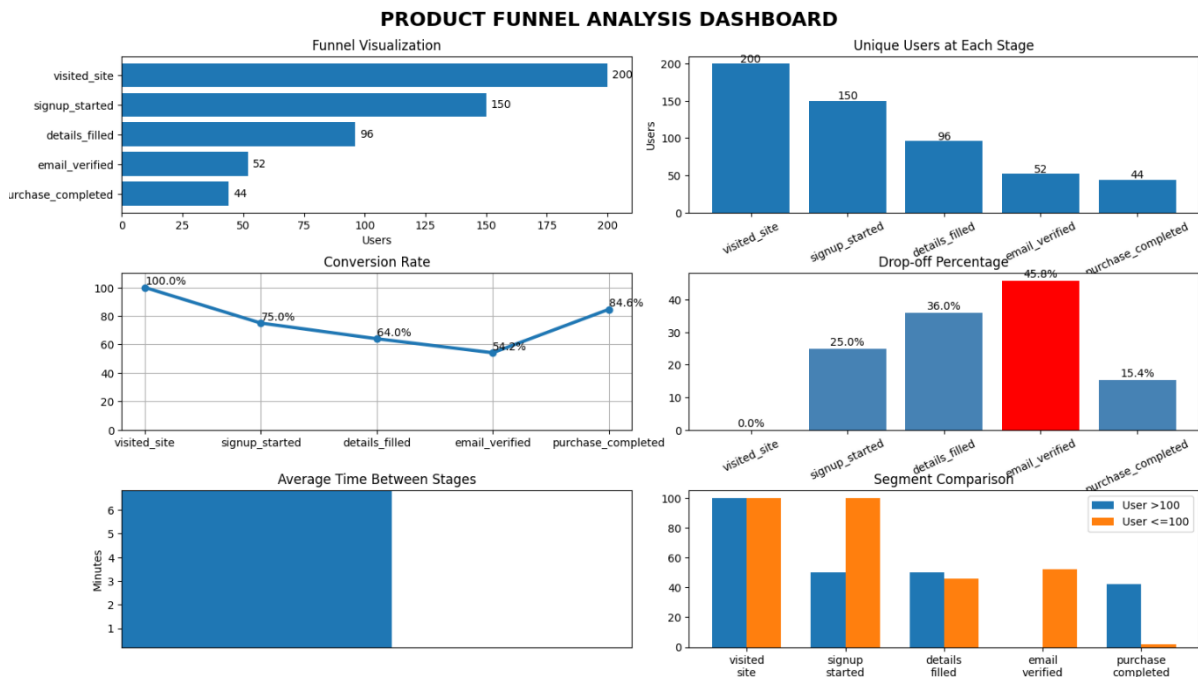

Tools Used

- Python
- Pandas
- NumPy
- Matplotlib

Approach Summary

Loaded and cleaned the funnel event dataset using Pandas by removing duplicate events and ordering the funnel stages. Calculated unique users, conversion rates, drop-off percentages, KPIs, average time between stages, and segment comparisons. Built a visualization dashboard using Matplotlib and identified the largest drop-off between Details Filled and Email Verified (45.83%).

Python Dashboard

Python output

```
=====
| | | | | PRODUCT FUNNEL ANALYSIS
=====
| | | | | Users Conversion % Drop-off %
visited_site 200 100.00 0.00
signup_started 150 75.00 25.00
details_filled 96 64.00 36.00
email_verified 52 54.17 45.83
purchase_completed 44 84.62 15.38

=====
KPI
=====
Total Users : 200
Purchases : 44
Overall Conversion : 22.00%
Largest Drop-off : details_filled -> email_verified
Drop-off Percentage : 45.83%

=====
AVERAGE TIME TO CONVERT
=====
| | | | | From To Average Minutes
0 visited_site signup_started 14.81
1 signup_started details_filled 14.57
2 details_filled email_verified 0.00
3 email_verified purchase_completed 0.00

=====
SEGMENT COMPARISON
=====
| | | | | User >100 User <=100
visited_site 100 100
signup_started 50 100
details_filled 50 46
email_verified 0 52
purchase_completed 42 2
